Prioritätsbescheinigung DE 102 20 961.8 über die Einreichung einer Patentanmeldung

Aktenzeichen: 102 20 961.8

Anmeldetag: 02. Mai 2002

Anmelder/Inhaber: Heinrich-Hertz-Institut für Nachrichtentechnik
Berlin GmbH, 10587 Berlin/DE

Bezeichnung: Verfahren und Anordnung zur Kodierung von Transformations-Koeffizienten in Bild- und/oder Videokodierern und -dekodierern sowie ein entsprechendes Computerprogrammprodukt und ein entsprechendes computerlesbares Speichermedium

IPC: H 04 N 7/24, H 04 N 7/30

Die angehefteten Stücke sind eine richtige und genaue Wiedergabe der am 02. Mai 2002 eingereichten Unterlagen dieser Patentanmeldung, hinterlegt mit dem Prioritätsbeleg vom 30. Mai 2003 bei der World Intellectual Property Organization.

Verfahren und Anordnung zur Kodierung von Transformations-Koeffizienten in Bild- und/oder Videokodierern
5 und -dekodierern sowie ein entsprechendes Computerprogrammprodukt und ein entsprechendes computerlesbares Speichermedium

10

Beschreibung

Die Erfindung betrifft ein Verfahren und eine Anordnung zur Kodierung von Transformations-Koeffizienten
15 in Bild- und/oder Videokodierern und -dekodierern sowie ein entsprechendes Computerprogrammprodukt und ein entsprechendes computerlesbares Speichermedium, welche insbesondere bei der digitalen Datenkompression eingesetzt werden kann.

20

Besonderes Kennzeichen der Erfindung ist, daß für alle Blöcke von Transformationskoeffizienten, einschließlich dem Luminanz-Block für den INTRA-4x4-Mode, ein einziger einfacher Scan-Vorgang durchgeführt wird wobei die Syntax-Elemente COEFF_COUNT und RUN hierbei durch ein Ein-bit-Symbol CBP4 und eine Signifikanz-Abbildung ersetzt werden. Die einzelnen Levels werden in umgekehrter Reihenfolge gescannt. Die Kontext-Modellierung erfolgt in neuer
30 Weise.

Improved Coding of Transform Coefficients with CABAC

Heiko Schwarz, Detlev Marpe, and Thomas Wiegand

We propose a new scheme for the coding of transform coefficients with CABAC, which further improves the coding efficiency compared to the CABAC version of the current working draft [1], especially for INTRA-frames. The differences to the current CABAC version can be summarized as follows:

- The simple single scan is used for all blocks of transform coefficients including the luminance blocks for the INTRA-4x4 mode.
- The syntax elements COEFF_COUNT and RUN are replaced by a one-bit symbol CBP4 and a significance map.
- The levels are encoded in reverse scanning order.
- The context modeling is changed for all syntax elements concerning transform coefficient encoding.

Figure 1 illustrates the new coding scheme. A one-bit symbol called CBP4 is transmitted first for each block of transform coefficients unless the CBP indicates that the regarded block has no non-zero coefficients. This CBP4 symbol is one if there are any significant coefficients inside the block. If it is zero, no further information is transmitted for the block; otherwise a significance map specifying the positions of significant coefficients is encoded. Afterwards, the absolute value as well as the sign is encoded for each significant transform coefficient. These values are transmitted in reverse scanning order. A more detailed description of the encoding process is given in section 1.1. In section 1.2, the context modeling is discussed.

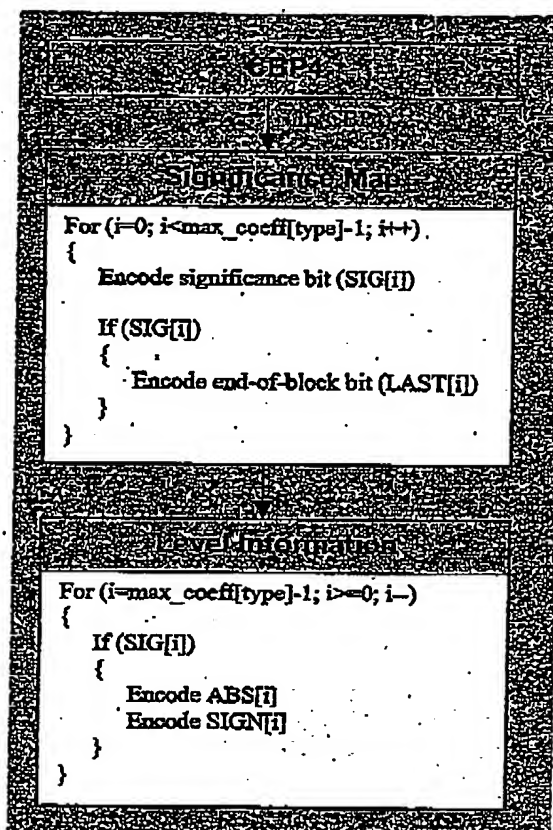

Figure 1: Proposed scheme for encoding of transform coefficients

1.1 Description of the coefficient encoding process

1.1.1 Scanning of transform coefficients

In contrast to the working draft Number 2 [1], where a double scan is used for transmitting the luminance block coded in INTRA-4x4 mode, we propose to use the simple single scan (zig-zag scan) for all block types including the luminance blocks coded in INTRA-4x4 mode.

1.1.2 CBP4

CBP4 is a one-bit symbol, which indicates if there are significant (non-zero) coefficients inside the regarded block of transform coefficients. If the CBP4 is zero, no further information is transmitted for the block.

1.1.3 Significance map

If the CBP4 indicates that a block has significant coefficients, a significance map is encoded. For each coefficient in scanning order, a one-bit symbol (SIG) is transmitted. If the SIG symbol is one, that is if a non-zero coefficient exists at this scanning position, a further one-bit symbol (LAST) is sent. This symbol indicates if the current significant coefficient is the last one inside the block or if further significant coefficients follow. Figure 2 shows two examples for the proposed significance map encoding. The significance information (SIG, LAST) for the last scanning position of a block is never transmitted. If the last scanning position is reached and the significance map encoding was not already terminated by a LAST-symbol of one, it is obvious that the last coefficient has to be significant (see yellow marked position in Figure 2).

Coefficient	0	1	0	1	0	0	1	0	1
SIG	1	0	1	1	0	0	1	0	1
LAST	0	0	0	0	0	0	1		

Coefficient	0	1	0	0	0	1	1	1	0	0	0	0	1	0	0
SIG	1	1	0	0	0	1	1	1	0	0	0	0	1	0	0
LAST	0	0	0	0	0	0	0	0	0	0	0	0	0		

Figure 2: Two examples for encoding the significance map (the yellow marked symbols are not transmitted)

1.1.4 Level Information

The encoded significance map determines the positions of all significant coefficients inside a block of quantized transform coefficients. The values of the significant coefficients (levels) are encoded by two coding symbols: ABS (representing the absolute value), and SIGN (representing the sign). While SIGN is a one-bit symbol (1 for negative coefficients), a unary binarization scheme (see Table 1) is used for encoding the absolute values of the coefficients. The levels are transmitted in reverse scanning order (beginning with the last significant coefficient of the block); this allows the usage of more reasonable contexts.

Table 1: Unary binarization for absolute values of quantized transform coefficients (ABS)

ABS	Bin	2	3	4	5	6	7	...
1	0							
2	1	0						
3	1	1	0					
4	1	1	1	0				
5	1	1	1	1	0			
6	1	1	1	1	1	0		
7	1	1	1	1	1	1	0	
...
bin	2	3	4	5	6	7	...	

10.05.03

1.2 Context determination

In JVT coding, there are 12 different types of transform coefficient blocks with different statistics of transform coefficients (left column of Table 2). However, for most sequences and coding conditions some of the statistics are very similar. To keep the number of contexts used for coefficient coding reasonably small, the block types are classified into 5 categories as specified in the right column of Table 2). For each of these categories, a special set of contexts is used.

Table 2: Basic block types with number of coefficients and context types

Block type	Number of coefficients	Context type
Luminance DC block for INTRA16x16 mode	16	0: Luma-Intra16-DC
Luminance AC block for INTRA16x16 mode	15	1: Luma-Intra16-AC
Luminance block for INTRA 4x4 mode	16	2: Luma-4x4
Luminance block for INTER mode	16	
U-Chrominance DC block for INTRA mode	4	3: Chroma-DC
V-Chrominance DC block for INTRA mode	4	
U-Chrominance DC block for INTER mode	4	
V-Chrominance DC block for INTER mode	4	
U-Chrominance AC block for INTRA mode	15	4: Chroma-AC
V-Chrominance AC block for INTRA mode	15	
U-Chrominance AC block for INTER mode	15	
V-Chrominance AC block for INTER mode	15	

1.2.1 Context determination for CBP4

For encoding the CBP4 bit, four different contexts are used for each of the five categories specified in Table 2. The context number for the current block C is determined by

$$ctx_number_cbp4(C) = CBP4(A) + 2 \times CBP4(B),$$

where A and B represent the corresponding blocks of the same type to the left and on the top of the regarded block C (see Figure 3). Only blocks of the same type (left column of Table 2) are used for context determination. If a neighboring block X (A or B) is positioned in a different slice, or if no neighboring block X of the same type exist (e.g. because the current block is INTRA-coded while the neighboring block X is INTER-coded), the corresponding CBP4(X) value is replaced by a default value. If the current block is coded in an INTRA-mode, a default value of 1 is used; otherwise, a default value of 0 is used. So, while all twelve block types (left column of Table 2) are distinguished for determining the context number, only five different sets of contexts (each for one category specified in the right column of Table 2) are used for encoding the CBP4 symbol. This results a total number of 20 contexts for the CBP4 bit.

18.05.03

6

Figure 3: Context determination for CBP4

1.2.2 Context determination for significance map encoding

For encoding the significance map, up to 15 contexts (depending on the block type category) are used for both the SIG and the LAST symbols. The context numbers are given by the corresponding scanning position, i.e. for a coefficient $coeff[i]$, which is scanned at the i -th position, the contexts are chosen as follows:

$$ctx_number_sig(coeff[i]) = ctx_number_last(coeff[i]) = i.$$

For each category of block types, we use $number_of_coefficients-1$ different contexts. This gives a total number of 61 contexts for both the SIG and the LAST symbol.

1.2.3 Context determination for level encoding

The absolute value of the significant coefficients is encoded using the uniform binarization depicted in Table 1. Here we use two different sets of contexts, one for the first bin (marked orange in Table 1), and another one for all remaining bins of the binarization:

$$ctx_number_abs_1bit = (coeff > 1 \text{ transmitted} ? 4 : \max(3, \text{number of } coeff=1 \text{ transmitted}))$$

$$ctx_number_abs_rbits = \max(4, \text{number of } coeff > 1 \text{ transmitted})$$

The level information is transmitted in reverse scanning order. The context for the first bin of the absolute values is determined by the number of successive coefficients (in reverse scanning order), which have an absolute value of 1. If more than three coefficients have an absolute value of 1, context 3 is always chosen. When a coefficient with an absolute value greater 1 is encoded, context 4 is used for all remaining coefficients of the regarded block.

All remaining bins of the absolute value are encoded using the same context. It is determined by the number of transmitted coefficients with an absolute value greater

1 (in reverse scanning order) with a maximum context number of 4. Figure 4 shows two examples of the context determination for encoding the absolute value of significant coefficients.

Coefficient	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64	65	66	67	68	69	70	71	72	73	74	75	76	77	78	79	80	81	82	83	84	85	86	87	88	89	90	91	92	93	94	95	96	97	98	99	100	101	102	103	104	105	106	107	108	109	110	111	112	113	114	115	116	117	118	119	120	121	122	123	124	125	126	127	128	129	130	131	132	133	134	135	136	137	138	139	140	141	142	143	144	145	146	147	148	149	150	151	152	153	154	155	156	157	158	159	160	161	162	163	164	165	166	167	168	169	170	171	172	173	174	175	176	177	178	179	180	181	182	183	184	185	186	187	188	189	190	191	192	193	194	195	196	197	198	199	200	201	202	203	204	205	206	207	208	209	210	211	212	213	214	215	216	217	218	219	220	221	222	223	224	225	226	227	228	229	230	231	232	233	234	235	236	237	238	239	240	241	242	243	244	245	246	247	248	249	250	251	252	253	254	255	256	257	258	259	260	261	262	263	264	265	266	267	268	269	270	271	272	273	274	275	276	277	278	279	280	281	282	283	284	285	286	287	288	289	290	291	292	293	294	295	296	297	298	299	300	301	302	303	304	305	306	307	308	309	310	311	312	313	314	315	316	317	318	319	320	321	322	323	324	325	326	327	328	329	330	331	332	333	334	335	336	337	338	339	340	341	342	343	344	345	346	347	348	349	350	351	352	353	354	355	356	357	358	359	360	361	362	363	364	365	366	367	368	369	370	371	372	373	374	375	376	377	378	379	380	381	382	383	384	385	386	387	388	389	390	391	392	393	394	395	396	397	398	399	400	401	402	403	404	405	406	407	408	409	410	411	412	413	414	415	416	417	418	419	420	421	422	423	424	425	426	427	428	429	430	431	432	433	434	435	436	437	438	439	440	441	442	443	444	445	446	447	448	449	450	451	452	453	454	455	456	457	458	459	460	461	462	463	464	465	466	467	468	469	470	471	472	473	474	475	476	477	478	479	480	481	482	483	484	485	486	487	488	489	490	491	492	493	494	495	496	497	498	499	500	501	502	503	504	505	506	507	508	509	510	511	512	513	514	515	516	517	518	519	520	521	522	523	524	525	526	527	528	529	530	531	532	533	534	535	536	537	538	539	540	541	542	543	544	545	546	547	548	549	550	551	552	553	554	555	556	557	558	559	560	561	562	563	564	565	566	567	568	569	570	571	572	573	574	575	576	577	578	579	580	581	582	583	584	585	586	587	588	589	590	591	592	593	594	595	596	597	598	599	600	601	602	603	604	605	606	607	608	609	610	611	612	613	614	615	616	617	618	619	620	621	622	623	624	625	626	627	628	629	630	631	632	633	634	635	636	637	638	639	640	641	642	643	644	645	646	647	648	649	650	651	652	653	654	655	656	657	658	659	660	661	662	663	664	665	666	667	668	669	670	671	672	673	674	675	676	677	678	679	680	681	682	683	684	685	686	687	688	689	690	691	692	693	694	695	696	697	698	699	700	701	702	703	704	705	706	707	708	709	710	711	712	713	714	715	716	717	718	719	720	721	722	723	724	725	726	727	728	729	730	731	732	733	734	735	736	737	738	739	740	741	742	743	744	745	746	747	748	749	750	751	752	753	754	755	756	757	758	759	760	761	762	763	764	765	766	767	768	769	770	771	772	773	774	775	776	777	778	779	780	781	782	783	784	785	786	787	788	789	790	791	792	793	794	795	796	797	798	799	800	801	802	803	804	805	806	807	808	809	810	811	812	813	814	815	816	817	818	819	820	821	822	823	824	825	826	827	828	829	830	831	832	833	834	835	836	837	838	839	840	841	842	843	844	845	846	847	848	849	850	851	852	853	854	855	856	857	858	859	860	861	862	863	864	865	866	867	868	869	870	871	872	873	874	875	876	877	878	879	880	881	882	883	884	885	886	887	888	889	890	891	892	893	894	895	896	897	898	899	900	901	902	903	904	905	906	907	908	909	910	911	912	913	914	915	916	917	918	919	920	921	922	923	924	925	926	927	928	929	930	931	932	933	934	935	936	937	938	939	940	941	942	943	944	945	946	947	948	949	950	951	952	953	954	955	956	957	958	959	960	961	962	963	964	965	966	967	968	969	970	971	972	973	974	975	976	977	978	979	980	981	982	983	984	985	986	987	988	989	990	991	992	993	994	995	996	997	998	999	1000	1001	1002	1003	1004	1005	1006	1007	1008	1009	1010	1011	1012	1013	1014	1015	1016	1017	1018	1019	1020	1021	1022	1023	1024	1025	1026	1027	1028	1029	1030	1031	1032	1033	1034	1035	1036	1037	1038	1039	1040	1041	1042	1043	1044	1045	1046	1047	1048	1049	1050	1051	1052	1053	1054	1055	1056	1057	1058	1059	1060	1061	1062	1063	1064	1065	1066	1067	1068	1069	1070	1071	1072	1073	1074	1075	1076	1077	1078	1079	1080	1081	1082	1083	1084	1085	1086	1087	1088	1089	1090	1091	1092	1093	1094	1095	1096	1097	1098	1099	1100	1101	1102	1103	1104	1105	1106	1107	1108	1109	1110	1111	1112	1113	1114	1115	1116	1117	1118	1119	1120	1121	1122	1123	1124	1125	1126	1127	1128	1129	1130	1131	1132	1133	1134	1135	1136	1137	1138	1139	1140	1141	1142	1143	1144	1145	1146	1147	1148	1149	1150	1151	1152	1153	1154	1155	1156	1157	1158	1159	1160	1161	1162	1163	1164	1165	1166	1167	1168	1169	1170	1171	1172	1173	1174	1175	1176	1177	1178	1179	1180	1181	1182	1183	1184	1185	1186	1187	1188	1189	1190	1191	1192	1193	1194	1195	1196	1197	1198	1199	1200	1201	1202	1203	1204	1205	1206	1207	1208	1209	1210	1211	1212	1213	1214	1215	1216	1217	1218	1219 Zusammenfassung

5

Die Erfindung betrifft ein Verfahren und eine Anordnung zur Kodierung von Transformations-Koeffizienten in Bild- und/oder Videokodierern und -dekodierern sowie ein entsprechendes Computerprogrammprodukt und ein entsprechendes computerlesbares Speichermedium, welche insbesondere bei der digitalen Datenkompression eingesetzt werden kann.

15

Hierzu wird vorgeschlagen, daß für alle Blöcke von Transformationskoeffizienten ein einziger einfacher Scan-Vorgang durchgeführt wird wobei die Syntax-Elemente COEFF_COUNT und RUN hierbei durch ein Einbit-Symbol CBP4 und eine Signifikanz-Abbildung ersetzt werden.
